(54) Title: CLOSURE SYSTEM FOR TUBULAR ORGANS

(57) Abstract: Surgically implantable adjustable ring (1) comprising a first (3) and second (4) end parts and which is designed to be closed around a tubular organ towards its two end parts (3,4) by a closure system (2,5) to adjust the diameter of said tubular organ by forming a loop, the first end part (3) forming a sleeve having a first (6) and second (7) open end parts and which is designed to receive the ring second end part (4), the sleeve main axis being defined along a direction which is substantially perpendicular to the main direction of the ring first end part (3), the ring second part (4) furthermore comprising a locking protrusion (2) adapted to hold the sleeve (3) and thereby secure the ring in a closed position, characterized by the fact that the sleeve (3) comprises a hole (5) designed to receive said locking protrusion (2).
